

# Monthly news

Here are a few highlights from the HUNT Cloud team as of February 2020.

## New web documentation

We are proud to announce that we have refurbished, expanded and moved our HUNT Cloud documentation to <https://docs.hdc.ntnu.no/>.

We appreciate ideas for new content, and encourage all lab users to send us questions to improve our [FAQ section](#). Read more on [how to contribute](#).

## New Helsenorm

The new [Normen 6.0](#) was approved in February. We have been adopting our procedures, among other introducing new [request forms](#) for data transfers that need signature from lab leaders or lab coordinators.

## COVID-19 and teleworking

We do not expect lab services to be affected by the increased amount of teleworking. Lab users can connect to labs from all Norwegian IPs. Foreign lab users will need to whitelist their IPs. Read more on [whitelisting](#) and [teleworking](#).

## Center portfolios

We plan to introduce a new "services agreement" level from April that allow us to organize collections of labs into center portfolios.

We think this will improve oversight over users and resources for those of you that control several labs. We will also introduce a new "center report" with aggregated measures.

## New lab agreements

We will finalize our new lab agreement template in March. The plan is to start re-signing on the new simplified format from April. This format includes more GDPR information on the data.

## Others

We have updated our yearly risk assessment this quarter. Lack of reliable funds is our most critical vulnerability. We work actively along several mitigation tracks.

Also, Sandor, Tom-Erik and Matus presented how we run our cloud services for an international team from Canonical, the company behind Ubuntu, in Frankfurt. And we successfully re-certified for ISO 9001.
